

MARCH 2024

Below is a list of current projects we are seeking US collaborators for:

1. Hepatic Cirrhosis Clinical Trial

Protean is seeking sites to enroll patients and participate in a clinical trial regarding blood testing to detect liver cancer. Subjects include those with cirrhosis of any etiology or chronic Hepatitis B without cirrhosis. *(Please ask for a full request criteria list).*

2. Cerebral Cavernous Malformation Clinical Trial

Protean is seeking sites to enroll patients and participate in a clinical trial regarding the safety, tolerability, and efficacy of an investigational drug in patients with cerebral cavernous malformation (CCM). Patients must be willing to participate in an MRI. *(Please ask for a full request criteria list).*

3. Bacterial Infection Diagnostic Test Clinical Trial

Protean is seeking sites to enroll study subjects presenting for acute respiratory infection, trained test users, untrained test users, and participate in a clinical trial regarding a candidate diagnostic test. This will include paired fingerstick blood samples collected from the patient by both trained and untrained users. *(Please ask for a full request criteria list).*

4. Prostate Clinical Trial

Protean is seeking sites to enroll patients and participate in a clinical trial regarding diagnostic blood testing in men who have not been diagnosed prior with any cancer with elevated PSA. *(Please ask for a full request criteria list).*

5. Colorectal Cancer Clinical Trial

Protean is seeking sites to enroll patients and participate in a clinical trial regarding collecting condensed exhaled breath samples from patients who are at average risk for development of colorectal cancer warranting diagnostic colonoscopy. Both genders aged 65-84 years preferred. Patients who have been diagnosed with a condition that is associated with high risk for colorectal cancer are not eligible. *(Please ask for a full request criteria list).*

Please let us know if you have any questions regarding any of these projects.
