

## MARCH 2024

Below is a list of current projects we are seeking collaborators for:

### 1. NSCLC Tissue Study

Protean is seeking tissue and matched blood from individuals with various smoking histories from all NSCLC cancer stages, including individuals who have treatment history. Smoking and alcohol consumption information must be known. Fresh tissue is preferred but frozen samples may be acceptable depending on processing protocol. *(North American locations preferred. Please ask for a detailed list of inclusion criteria).*

### 2. HRD Tested Sample Collection

Protean is seeking FFPE or DNA samples that have known positive, indetermined, and negative HRD scores. All samples require at least 100 ng of DNA. *(Please ask for a full request criteria).*

### 3. KRAS G12c Plasma Collection

Seeking a retrospective collection, characterized G12c plasma.

### 4. AML Extracted DNA

Looking for AML extracted DNA from whole blood or bone marrow. Samples must be collected in EDTA tubes and cytologically proven AML.

### 5. PSA Blood

Seeking whole blood with known high PSA levels.

Please let us know if you have any questions regarding any of these projects.
